

4 TIPS TO IMPROVE YOUR A3 PROBLEM SOLVING

Problem solving is a difficult skill, and one that takes much effort to master. Here are 4 tips to help you focus on maximizing your learning and avoid common A3 pitfalls

The Form Doesn't Matter

It's the thinking that goes into completing the A3 that matters, not the form itself. Don't waste time worrying about the size of the paper or the template you have available.

Make It Clear, Not Pretty

If your A3 is a work of PowerPoint art, you're wasting effort. Learning is a messy process of trial and error. Write A3s in pencil, and erase frequently as your understanding evolves.

Visualize Your Thinking

Pictures convey more information than words. Drawing helps expose the gaps in your learning that are otherwise hidden. Be creative and draw pictures rather than writing lengthy descriptions.

Tell a Story

Stories ensure continuity by tracing the development of a plot line from its initial development to its final resolution. Tell the story of your problem.
